"Physical gold is something that you have control over—it's in your hands."

—DIANE, U.S. MONEY RESERVE CLIENT

Free Gold Information Kit

UNLOCK THE SECRET TO WEALTH PROTECTION

Did you know that the average U.S. family's wealth plunged nearly 40% during the Great Recession of 2007-2009? Meanwhile gold gained more than 75%.

Don't be caught unprepared when an unexpected economic crisis hits. Learn how to protect and grow your savings by diversifying your assets with physical gold before it's too late.

As the only precious metals firm guided by two former Directors of the U.S. Mint, U.S. Money Reserve makes diversifying with gold fast, easy, and secure.

Get everything you need to know about gold!

- ✓ Answers to the most commonly asked questions about gold ownership
- ✓ Information on how gold can protect and grow your savings
- ✓ Special introductory offers you won't find anywhere else
- ✓ Two additional exclusive reports: "Global Gold Forecast" and "Protection in the Risk Zone"

Wiring the American Dream

ON LINEWORKER Appreciation Day, April 8, we celebrate the 20 Texas electric cooperative lineworkers who brought electricity to Matasanos, a rural village in Guatemala. They spent two weeks there in November as part of NRECA International, a program that for more than 60 years has delivered electricity to remote places that had none—exactly what co-ops did in rural Texas 85 years ago.

Ten South Texas co-ops sent two crew members each, plus support staff. When they finished, 60 homes had each been wired with four lights, two switches and two outlets. Villagers helped the lineworkers move equipment up the mountain.

“I believe we take the American dream on the road and transplant it to other countries,” says Jim Coleman, general manager at Jackson Electric Cooperative in Edna, who has participated in several international projects. He was joined in Guatemala by GMs from four other Texas co-ops.

No Fooling

Some historians say April Fools' Day customs have been around since the 16th century, when France's King Charles IX decreed the new year would begin January 1—not on Easter. Those who clung to the old ways were called April fools.

THORNY TASK

Scientists, landowners and plant
lovers work to preserve hundreds
of threatened Texas natives

TEXAS POPPY-MALLOW

Randy Deming often walks his 10 acres of rural land in Callahan County, near Abilene, always on the lookout for a flower, insect or bird he hasn't spotted before.

Using an app called iNaturalist, he documents the native grasses, yuccas, Ashe junipers, live oaks and other plants that grow there. Thanks to the app, Deming learned in 2021 that one of his flowering species could be one of only a few remaining populations in Texas.

"I took pictures of a pretty flower and forgot about it," recalls Deming, a member of the Texas Master Naturalist Program and Taylor Electric Cooperative. "A few months later, I was skeptical when someone contacted me through iNaturalist and asked to see my large-flower beardtongues.

"When they told me how rare they are, I was excited," Deming says. "I could have mowed them down! Now I'm watching over them."

In the future, large-flower beardtongues—a tall, erect perennial with tubular purple blooms—could be legally protected if researchers collect enough ecological data to substantiate the designation. In the meantime, 437 other Texas plants have already been designated by the state as "species of greatest conservation need," meaning they're in decline and need attention. Some of those species require even more urgent measures. These are further labeled as threatened or endangered.

The two legal terms stem from the Endangered Species Act, a federal law enacted in 1973 to protect and help recover the nation's imperiled plant and animal species and their habitats. The U.S. Fish and Wildlife Service oversees the federal list and partners with the Texas Parks and Wildlife Department, which manages the Texas list. A species can be federally and state protected, such as shrubby Texas snowbells in the Hill Country, or just one or the other.

However, the process for federally listing a species can stretch out for years. Consider the bracted twistflower, a tall annual with lavender flowers that has been increasingly lost to urban sprawl and hungry herbivores. Found only within the Edwards Plateau, the wildflower has been marked as imperiled since 1975 and was petitioned for

TURNER'S CLIFF THISTLE

federal listing in 2014. In May 2023—nine years later—the USFWS finally listed the bracted twistflower as threatened. In Coryell County, the imperiled Texabama croton faces similar challenges.

Plants of all kinds in Texas face many pressures. Every year, development scrapes away one natural area after another. Invasive plants, agriculture, poaching, mining, weather, loss of pollinators, and land and water management also negatively impact the state's flora.

But does it really matter if a few of Texas' estimated 5,000-plus native plant species go away? The answer is yes.

"We have biodiversity for a reason," says Anna Strong, a rare species botanist with TPWD. "Each organism interacts with others in specific ways. Regardless of whether it's rare or common, if we take out one organism, we don't know the implications amongst all the organisms. If we take out one flower, we may take a food source away from a specific insect that relies on that species."

At the San Antonio Botanical Garden, botanist Michael Eason works to conserve and propagate rare Texas plants. "We have more than 90 species in our collections," Eason says. "Some are displayed in our gardens, which helps to educate the public. Others are seed collections, which haven't been propagated yet."

One of those species, prostrate milkweed, a low-growing perennial, is endemic only to Starr and Zapata counties and northeastern Mexico. Since at least 1980, invasive

Glossary

An endangered species is defined under the Endangered Species Act as “any species which is in danger of extinction throughout all or a significant portion of its range.”

A threatened species is defined under the ESA as “any species which is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range.”

Imperiled is not a legal term. Biologically, it refers to unprotected species that are in decline and may be in danger of extinction.

Rare plants have very limited ranges or exist in low numbers.

buffelgrass, road construction and development have drastically reduced its numbers. After several petitions to the USFWS, prostrate milkweed—an important monarch butterfly host plant—was federally listed as endangered in March 2023. The agency also designated 661 acres as critical habitat needed by the species to survive.

For his part, Eason spent five years tracking down the scarce milkweeds and collecting seeds, then having a milkweed specialist grow the plants to maturity. “We ended up with 150 plants,” he says. “We passed some to other botanical gardens. We’ll install some in our rare plant gardens. The remainder will be kept for perhaps reintroductions in South Texas and donations to other institutions with the Center for Plant Conservation.”

Headquartered in Escondido, California, the CPC is a

TEXAS SNOWBELL

TEXAS SNOWBELL: CHASE FOUNTAIN | TPWD. TEXABAMA CROTON: RAY MATTHEWS | LADY BIRD JOHNSON WILDFLOWER CENTER

Grassroots Efforts

The Texas Department of Transportation monitors for rare plants prior to road construction and along state highways and rights of way. Edd Paradise, a TxDOT environmental planner in Pharr and a Magic Valley Electric Cooperative member, worked with USFWS to relocate endangered Zapata bladder-pods in Starr County.

Aaron Lincoln—a biodiversity manager with Lhoist, a global corporation—oversees a pilot project to restore grasslands and a pocket prairie at a 3,000-acre chemical lime plant and quarry in Bosque County. So far, he’s documented glandular blazing stars, Hall’s prairie clover, lemonscent and other declining species. Lincoln also hopes to set aside 122 acres as a refuge for white troutlilies and morel mushrooms.

The Friends of the Warren Ferris Cemetery in Dallas rallied to transform the historic cemetery’s neglected grounds into native habitat. Today, the Constellation of Living Memorials pilot project includes eight old cemeteries and will serve as an example for revitalizing the state’s 5,000-plus historic cemeteries. One project goal is to encourage the recovery of threatened and endangered plant species.

TEXABAMA CROTON

nationwide network of organizations working together to save imperiled native plants. The San Antonio Botanical Garden partners with the CPC, as do the Botanical Research Institute of Texas at the Fort Worth Botanic Garden, Mercer Botanic Gardens in Humble and the Lady Bird Johnson Wildflower Center in Austin.

As part of its conservation efforts, the wildflower center stores seeds of 575 Texas plant species for research and sharing with botanical gardens and conservation organizations. The seed bank, housed mostly in freezers, also serves as an insurance policy against the loss of imperiled species.

“We visit wild populations that we have permission to access, either on public land or through contacting land-owners,” explains Jonathan Flickinger, conservation collections manager at the wildflower center. “We harvest seeds

BRACED TWISTFLOWER

from plants, but we don't take too many because our priority is to conserve the plants in their natural habitat."

In some cases, researchers may rescue plants by digging them up. That happened with the Texas poppy-mallow, listed as federally endangered in 1981. The tall perennial with reddish purple flowers grows in deep sandy soils along the Colorado River in four counties.

In 2010, some conservation-minded landowners asked that a population of poppy-mallows be removed from a future construction site on their property. That summer, wildflower center staff and other colleagues extracted 54 plants and fostered them in pots for three years.

"We harvested more than 3,000 seeds from them for our seed bank," Flickinger says. "Then we identified another site where they were reintroduced."

Landowners play a huge role in plant conservation, namely because about 95% of Texas' land is privately owned. When threatened or endangered plants grow on private land, landowners are not legally required to manage them under the Endangered Species Act (the law differs for listed birds and animals).

Botanists and other officials must always ask permission before accessing private land. Typically, they want to survey plant species, perhaps harvest a small amount of seeds and collect plant material for herbarium vouchers.

The Fish and Wildlife Service offers a program that provides property owners with free technical and financial assistance for improving wildlife habitat on their land. "We're always looking for opportunities to work with landowners," says Chris Best, USFWS botanist. "Most of the ones I've met want to protect their land's natural resources."

That aptly describes attorney Liz Rogers, a Medina Electric Cooperative member. For more than two decades, she's welcomed researchers onto her family's 8,000-acre cattle ranch in southeastern Brewster County, along the Mexico border. "They always show me cool things, which has made me appreciate our ranch even more," she says.

Eason has been among many plant conservationists who have botanized the ranch's Trans-Pecos deserts, canyons and mountainsides. "Liz has an assortment of rare plants found along cliff faces and other protected areas," he says. "We've collected plants such as Turner's cliff thistle, rock-daisy and Barton's dalea. She also has a small population of night-blooming cereus."

Whether rare or not, showy or inconspicuous, every native plant matters. "We shouldn't focus conservation merely on species that have declined so far that they're teetering on the brink of extinction," Best says. "We should be working to keep common plants common." ■

Noah's Arks for Seeds

Just as the Lady Bird Johnson Wildflower Center in Austin stores seeds of 575 Texas plant species for research, national and global seed vaults do the same—preserving plant types in case they are wiped out by natural or human-made disasters.

The National Laboratory for Genetic Resources Preservation on the campus of Colorado State University is run by the U.S. Department of Agriculture. It houses more than 850,000 plant seeds and materials, as well as DNA samples from about 160 breeds of livestock.

The Svalbard Global Seed Vault, located about halfway between the North Pole and the coast of Norway, is more than 300 feet inside a mountain, where the permafrost maintains a stable temperature between 26 and 39 degrees. Three large concrete chambers have the capacity to hold 3.5 million seed samples.

HOLDING PROMISE

BANDERA'S **HELPING HAND** PUTS RELIEF WITHIN REACH FOR NEIGHBORS IN NEED

FROM THE ROAD, it doesn't stand out from any other small office complex you might find in the Hill Country. But once you pass through the towering iron gate, get out of your car and start walking, the landscape becomes much more inviting: winding paths that lead to a peaceful courtyard and a sprawling pergola nestled against a scenic lily pond.

This is what hope looks like. More specifically, the Village of Hope—the cluster of buildings owned by Bandera County Helping Hand, a haven for residents facing a personal crisis. Are you sick? There's a free medical clinic. Is your cupboard bare? Head over to the food pantry. Do you need shoes, clothes or basic household items? The thrift store has what you need.

Since 1984, Bandera Helping Hand has been a steadfast safety net for folks who have hit hard times.

"We're here to help people get on their feet," says Jesse Parks, executive director of Helping Hand. "You never know what tomorrow will bring. Everything's great until all of a sudden there's a car wreck and somebody's gone or there's a flood or a fire and you've lost everything. It's devastating."

Parks speaks from experience. In the late 1990s, she and her husband uprooted their lives in Corpus Christi and moved to Medina, just west of Bandera, where they signed a long-term lease on a piece of land and started working on their dream: building a facility for teens experiencing crisis. Two years later, without warning, the landowner sold it out from under them, including the structures and improvements they'd funded with their own money.

They lost everything. To make ends meet, Parks got a job at the Apple Store in Medina (which actually sells fruit). One day a friend came in and told her that she'd recommended Parks for the director position at Helping Hand. Even though she'd never worked at a nonprofit, Parks accepted the position and has led the organization since 2000.

Helping Hand began 16 years earlier, in 1984, when local churches came together to assist neighbors in need. The aim was to pool resources and provide a central place where people could go for help. In the early days, Helping Hand operated a thrift store and a food pantry and provided school supplies for children. It also helped struggling residents pay their utility bills.

But when the Medina River swept through the town during the devastating South Texas floods of 2002, it demolished Helping Hand's facilities. Quite suddenly they were among those in crisis.

"Our building was completely destroyed," Parks remembers, "so we set up shop in a warehouse and started gathering donations from other food banks. The Salvation Army came in and helped us provide aid for flood victims as well."

Seeing how generously and efficiently Helping Hand had been serving the community, Bandera's city council offered them space so they could continue helping residents while they figured out how to start over themselves. And that's when offers of help started pouring in.

"A retired grant writer by the name of Dan Wise got in touch and offered to help us raise funds to rebuild," says Parks, a member of Bandera Electric Cooperative. "I looked forever for land that was not in a flood plain and finally found this 3.77 acres. We bought it with money we borrowed from Bandera Bank but were able to pay it back within a year using the grants that Mr. Wise helped us get from various foundations."

By early 2004, Helping Hand's crisis intervention center was complete. At the building's dedication, then-board President Comellia Rue announced that the next structure they would build was a free medical clinic to serve the county's uninsured residents. But no one had any idea where the money would come from.

Enter Kerrville businessman Arthur Nagel, who approached the pastor of a local church and told him God had given him a vision to start a medical clinic in Bandera. The pastor introduced Parks to Nagel, who donated \$150,000 to construct the shell of the clinic building on the Village of Hope grounds. Within a year, Helping Hand had raised enough money to complete the clinic and operate it for a year. The clinic formed its own nonprofit and opened its door to patients in 2008.

Today the Arthur Nagel Community Clinic is open three days a week. In addition to primary care, the clinic offers mental health services and teen and elder care programs. Healthy cooking and cardio fitness classes are also available. The clinic provided an estimated \$1.9 million in health services to 443 Bandera County residents in 2023, says clinic director Chuck Lutke.

The food pantry stays stocked thanks to food and cash donations from individuals and contributions from other food banks. As a result, Helping Hand can feed an average of 130 families a month.

At the thrift store, which thrives on steady donations of gently used clothing and household items, residents purchase what they need at affordable prices. Sales cover nearly three-fourths of Helping Hand's annual operating budget.

"Helping Hand is about community," Parks says. "We all work as a team. I see us as a community of 'hands' that resources pass through. Each one of us has been through hard times and knows what a little compassion and love can mean in a crisis situation.

"Helping people get back on their feet and feeling good about themselves as they overcome whatever they're going through is a privilege.

"It's not a handout, it's a hand up." ■

OPPOSITE, CLOCKWISE FROM TOP The Village of Hope welcomes folks who have hit hard times. Angelica Hernandez greets patients at the medical clinic, which is open three days a week. The food pantry can feed 130 families a month.

YOUR ULTIMATE SILVER DOLLAR SET

150 Years of Iconic U.S. Silver Dollars from the Morgan to the Silver Eagle in One Master Collection!

The heritage of American Silver Dollars is rich and diverse, marked by stunningly beautiful designs, leading to an enduring desirability in the hearts of collectors around the world. In this iconic U.S. Silver Dollar set, spanning nearly 150 years, you're getting FIVE American Silver Dollars issued over the last 15 decades that each reflect the history, culture and economic aspects of the United States.

We've Done the Work for You with this Extraordinary 5-Pc. U.S. Silver Dollar Set

Each of these U.S. Silver Dollars is sought-after by collectors individually, but this set includes every design of U.S. Silver Dollar in American history, issued from 1878 to 2024!

Morgan Silver Dollar: First struck 146 years ago in 1878, the Morgan has a historic legacy as the coin that helped build the American West. Minted until 1904, then again in 1921, this 90% silver coin with its iconic Lady Liberty design is the most collected vintage Silver Dollar in the world. Extremely Fine (XF) condition coin included in set.

Peace Silver Dollar: With a beautiful design memorializing peace following the end of World War I, the 90% silver Peace Dollar was intended as a one-year only release struck in 1921—but it proved so popular with the American people, it was struck until 1928, then again in 1934-35. Extremely Fine (XF) condition coin included in set.

Eisenhower Dollar: The last circulating U.S. dollar coin, the Eisenhower Dollar, aka the "Ike Dollar," was prized by Americans, with its design featuring war hero President Dwight D. Eisenhower, backed by an image symbolizing the Apollo II moon landing. First struck with silver 1971-1976, the Eisenhower Dollar in this set was struck in 40% silver for collectors, and you will receive a coin in Brilliant Uncirculated (BU) condition.

Silver Eagle Type 1: The first-ever U.S. Silver Dollar minted in 99.9% silver, these coins were first minted in 1986 following President Ronald Reagan's signing of the Liberty Coin Act into law on July 9, 1985, which authorized the U.S. Mint to strike America's new silver bullion coin. This gorgeous Silver Dollar features the original, revered Type 1 "Heraldic Eagle" reverse design by John Mercanti, 12th Chief Engraver of the U.S. Mint. Brilliant Uncirculated (BU) condition coin included in set.

Silver Eagle Type 2: In honor of the popular 99.9% silver coin's 35th anniversary in 2021, the Silver Eagle received a new, esteemed Type 2 "Eagle Landing" reverse design. This is the current issued coin by the U.S. Mint. Brilliant Uncirculated (BU) condition coin included in set.

Our Heroes Wear Hard Hats

LINE WORK IS NOT A glamorous or easy profession. It takes years of specialized training and ongoing education and, just as important, a sense of service and commitment to your community. How else can you explain the willingness of lineworkers to leave the comfort of their homes to tackle a challenging job in difficult conditions, when most other folks are sheltering safely with their families?

This dedication and service is truly what sets our lineworkers apart. That's why Karnes Electric Cooperative sets aside the second Monday in April—April 8 this year—to celebrate and recognize the men and women who work around the clock to keep the lights on.

We join other electric cooperatives across our state and nation in celebrating Lineworker Appreciation Day to recognize those workers' critical roles

**Our lineworkers
are heroes in
every sense
of the word.**

in providing our members with the power they depend on.

Every day, lineworkers face immense risks. Carrying heavy gear, they regularly scale 40-foot poles near

high-voltage power lines, often in the wake of Mother Nature's worst. It's no wonder their profession is among the most dangerous in the country.

Karnes EC's lineworkers maintain thousands of miles of power lines, keeping the lights on for our members. Our lineworkers are heroes in every sense of the word. As the first responders of our workforce, we count on them to get us through some of our darkest hours, day or night. They truly deserve this special day of recognition.

We appreciate our dedicated lineworkers and are proud of their commitment to our members. They deserve all the appreciation and accolades that come their way.

On April 8, and any time you see a lineworker, we hope you'll take a moment to thank them for their service. ■

Lights.
Air conditioning.
Clean clothes.

**Proudly brought
to you by
Karnes EC**

**Lineworker
Appreciation Day**

Conserve Hot Water To Save Money

EVERY DROP OF HOT WATER you don't use adds up to savings on your energy bill.

Think about how often you run the hot water faucet or an appliance that uses hot water—and whether you could either turn it off or use cold water instead. Heating water is the second-largest energy expense in your home, second only to air conditioning, accounting for about 18% of a typical utility bill.

Here are seven ways to use less hot water:

1. Swap your old showerhead for a low-flow model that displays the Environmental Protection Agency's WaterSense label. Typical showerheads deliver 2.5 gallons of water per minute; WaterSense models release no more than 2 gallons per minute.
2. Set a timer for five minutes, and turn the shower off when the alarm rings. You can also turn the water off while you lather up your hair and turn it back on to rinse off.
3. Plug the sink while shaving instead of running the water the whole time to rinse your razor under the spigot. You could save up to 300 gallons of water a month this way.
4. Soak pots and pans instead of scraping them under running water. They'll clean up quicker, and you'll save water and energy.
5. Fix that leaky hot water faucet. It's often a simple repair, but replacing it will cost less than you'll pay for years of wasted water and energy that escapes through a leaky tap.
6. Wait until you have a full load in the dishwasher before you run it.
7. Insulate any hot water lines that you can access to prevent the heat from escaping before it gets to its destination. ■

Tame Your Trees

We love our trees, but when branches are too close to power lines, they can cause power outages, fire hazards and other safety concerns. Here are some rules to follow:

If a tree or a large branch is touching—or falls on—an electric line, call your electric cooperative immediately.

Never trim trees that grow close to power lines; that is a job for professionals. Call your electric cooperative for assistance and guidance.

Use extreme caution when doing any overhead trimming. Branches often fall in unexpected places.

Don't allow children to climb trees or build treehouses close to power lines.

Plant appropriate distances from all power lines.

When planting a tree, consider how tall the tree will grow. At maturity, trees should be at least 10 feet away from power lines.

Karnes EC encourages you to always practice safety.

MINERVA STUDIO | ISTOCK.COM

Smoked Potato Salad

12 medium red potatoes,
scrubbed and pierced
¼ cup thinly sliced green onions
¼ cup red wine vinegar
¼ cup olive oil
3 tablespoons whole-grain
mustard
¼ cup mayonnaise, or more
if desired
Salt and pepper to taste

1. Preheat oven to 400 degrees. Bake potatoes 45 minutes. While the potatoes bake, prepare your smoker.
2. Smoke potatoes 1 hour in low heat (250 degrees or less). When finished, remove from smoker and dice into 1-inch chunks, or larger as desired.
3. Combine remaining ingredients in a large bowl and whisk to combine. Fold in the potatoes (mixing gently so they hold their shape). Adjust seasonings as desired and serve immediately or refrigerate for up to 3–4 days. For the best texture and flavor, take the salad out of the fridge 30 minutes before serving.

SERVES 6–8

Operate Your Generator Safely

THE PRIMARY HAZARDS to avoid when using a generator are carbon monoxide poisoning from the toxic engine exhaust, electric shock or electrocution, and fire. Here are some tips for safely using a portable generator.

- ▶ Always thoroughly read and follow the directions supplied with the generator.
- ▶ Never try to power a house wiring by plugging the generator into a wall outlet. Known as “backfeeding,” this practice puts utility workers, your neighbors and your household at risk of electrocution.
- ▶ To avoid electrocution, keep the generator dry and do not use in rainy or wet conditions. Operate it on a dry surface, and do not touch the generator with wet hands.
- ▶ Set up and run your generator in a well-ventilated area outside the home. Make sure it’s well away from your garage, doors, windows and vents. The carbon monoxide generated is deadly.
- ▶ Be sure to turn the generator off and let it cool before refueling. Gasoline spilled on hot engine parts could ignite.
- ▶ Store fuel for the generator in an approved safety can and outside of living areas in a locked shed or other protected area. Use the type of fuel recommended in the instructions or on the label on the generator.
- ▶ Plug appliances directly into the generator, or use a heavy duty, outdoor-rated extension cord that is rated (in watts or amps) at least equal to the sum of the connected appliance loads. Check that the entire cord is free of cuts or tears and that the plug has all three prongs, especially a grounding pin.
- ▶ Remember, even a properly connected portable generator can become overloaded, resulting in overheating or generator failure. Be sure to read the instructions.
- ▶ If necessary, stagger the operating times for various equipment to prevent overloads. ■

Small Changes Can Have a Big Impact

EARTH DAY IS APRIL 22. Celebrate by making an Earth Day “resolution” to change at least one energy-related bad habit at home.

Here are some ideas:

If you haven’t already, switch your lamps and overhead light fixtures to LED versions. You can even use LED bulbs in older fixtures.

Turn off the lights when you leave a room and teach your children to do the same. This time-tested advice still applies.

Unplug appliances like the TV and your computer when you’re not using them. Appliances that are turned off but still plugged in draw small amounts of electricity.

Take shorter showers. You’ll save water and energy.

Plant a tree strategically to create shade over southern-facing windows to protect your home from summer heat, reducing the need for air conditioning.

Switch to a smart thermostat to automatically adjust the temperature for when you’re away. ■

A Balanced Team for Reliability

Diverse power sources keep your co-op in the game

THE WINNINGEST BASKETBALL TEAMS in history are consistent and have players with unique abilities. Some are better at shooting three-pointers; others are best at defense. Having a balanced mix of skills makes the team a powerhouse on the court. Keeping electricity reliable is a bit like that.

The power team first requires a foundation of consistent sources that can be put in the game any time they're needed. Having enough "always available" fuel sources like natural gas and coal can ensure consistent power generation.

However, just like a team needs different players for different situations, our power grid requires multiple sources to keep the grid running. Relying solely on one player to win every game is not an effective strategy—if they get injured, you'll likely lose. Similarly, using a single fuel source for electricity generation poses a significant risk to energy reliability. Natural disasters, geopolitical tensions or unforeseen disruptions can severely impact the supply chain of a particular fuel.

A diverse mix of energy sources acts as a safeguard, ensuring that the grid remains operational even in the face of unexpected challenges.

A diverse energy mix also enhances grid flexibility by accommodating the intermittent nature of renewable energy sources like solar and wind. Think of solar power like a team's inconsistent three-point shooter. It's awesome when the sun is shining bright, but what if it's nighttime or a cloudy day? That's where

the other players, like wind, hydro, nuclear, natural gas and coal, can step up and keep the team scoring.

Diverse fuel sources contribute to the stability and reliability of the electric grid. The different sources have varying characteristics, including generation patterns, responsiveness and storage capabilities. This diversity allows for a more balanced and resilient energy system that can adapt to fluctuating demand and unforeseen circumstances. Having a mix of energy sources is like having a team with different skills to handle various situations and scenarios.

A diverse set of energy sources is essential, but that's not the only thing we need to have reliable electricity—or a winning team. Basketball teams are always trying out new plays or developing rookies to create a versatile lineup. Similarly, electric cooperatives are constantly innovating to maintain reliability for tomorrow. But creating new ways to make our power sources more efficient and reliable takes time, money and advances in technology that aren't necessarily ready yet.

As we continue to work on the innovations of tomorrow, the key to keeping our electricity reliable right now is ensuring a diverse lineup of fuels. Each one brings something special to the table, and together, they make sure we have the power we need, whenever we need it. ■

Get Your Home Ready for Summer

YOU STILL HAVE PLENTY of time before you need to blast the air conditioning at home during hot summer weather. In the meantime, use the spring season to do some maintenance that could help your AC run more efficiently and reliably this summer.

Here are some tips:

Replace air filters before you turn the air conditioner on for the first time. Then, replace them again about once a month until autumn. Clean air filters allow conditioned air to flow easily through your rooms. And they lower the amount of dust, dander and pollutants that get pushed into your indoor air.

Move lamps away from thermostats. Electronics and lamps give off heat when they're turned on, which can fool your AC into "thinking" the room is warmer than it is.

Seal leaks. If you felt cold drafts coming inside during the winter, find the sources of the leaks and caulk them. Look around ducts, cables and wires on the indoor side of exterior walls. Those same leaks will let cool, conditioned air escape during the summer.

Switch the direction of your ceiling fan blades. For warm weather, the blades should rotate counterclockwise.

Schedule an inspection. A qualified HVAC pro can spot problems with your AC system before they cause a malfunction and make sure your equipment is maintained and ready for warm weather.

Change out any old lightbulbs for LEDs. The latest lighting technology makes these the most energy-efficient choice, and bulbs come in various tones to suit your home's needs.

Check your insulation. If your home is older, it might not have the recommended amount or optimal type of insulation.

Clean air vents. Vents covered in hair and dust won't circulate air as efficiently as clean ones. ■

LEMONADELUCY | ISTOCK.COM

Suit Up for Outdoor Spring Chores

THIS SPRING, DOUBLE DOWN on your protective gear when you venture out into your yard for chores.

Operating lawn mowers, leaf blowers, saws, weed trimmers and other outdoor equipment is safer when your eyes, skin and hands are protected. But a simple spring cleanup can turn to tragedy in a second if you don't cover up before you plug in.

Basic protective gear includes goggles or safety glasses to cover your eyes; work gloves for your hands; and sturdy, water-proof boots.

In addition, cover your skin with a lightweight long-sleeved shirt and long pants. Covering up protects you from sun exposure as well as shields you from flying debris. Consider shin guards too when using a weed trimmer.

Protect your head with a helmet if you're working in an area with a lot of rocks or pebbles or climbing a ladder.

And if you're operating extra-loud equipment, especially for a prolonged period, plug your ears too. ■

Lengthen the life of your dryer with regular cleaning. Clean the lint filter after every load and check the lint trap opening to ensure it's clean.

Bizarre Bunnies

Unlike wacky jackalopes, very real horned rabbits begot great leaps in medical breakthroughs

BY CLAY COPPEDGE • ILLUSTRATION BY WILLIAM L. BROWN

IN 1915, there appeared in *The Roscoe Times* the story of a horned rabbit that one W.A. Ater said he killed on his ranch just outside the small town, west of Abilene. Ater took the peculiar creature to the newspaper's office to show the skeptics he wasn't lying about the rabbit or its horns.

Sure enough, the little rabbit, a cottontail, had horns—and it wasn't the first horned rabbit to be found in Texas that year. The newspaper noted that another horned rabbit had been killed in South Texas, near San Benito, which “leads to the conclusion on the part of local scientists that there is a distinct breed of this species.”

While we don't know what kind of scientific community existed in Roscoe in 1915, we can be certain that Ater did indeed kill a horned rabbit. The news reporter described it thusly: “The rabbit which Mr. Ater killed and brought into town had two horns, each about four inches in length. It presented a grotesque appearance, resembling a miniature deer more than it did a genuine rabbit.”

Newspapers across the state picked up the story, adding editorial embellishments ranging from curiosity to amusement. An Austin paper snickered, “The discovery of two horned rabbits in Texas leads to the suspicion that there is probably a herd of saber-toothed sheep at large in this section.”

Stories of horned rabbits weren't as rare in 1915 as the skeptics supposed. In fact, they've been around about as long as rabbits. Persian texts from the 13th century mention horned rabbits. The Huichol, an Indigenous people of northern Mexico, told of the horned rabbit as a mysterious creature that gave the deer its horns. In 1915 alone, there were more than 150 stories about horned rabbits in newspapers across America. That Roscoe rabbit was no outlier.

The curious folks who gathered in *The Roscoe Times* office to look at Ater's peculiar bunny concluded that the horns were not very formidable weapons, whether for offense or defense, and were left to ponder what they were good for. Naturalists didn't know why some rabbits developed horns.

The answer remained elusive until 1932, when virologist Richard Shope discovered that rabbits sometimes develop “horns” as the result of a virus that creates tumors called fibromas on the skin. The infections probably arise from insect bites on the

head and face, which evolve into what has come to be known as the Shope papillomavirus, giving a rabbit the appearance of having horns.

Rabbits typically have an immune response that gets rid of the virus and growths, but occasionally the growths occur around the mouth, hindering the animal's ability to eat. More importantly, Shope found that rabbits that survived the virus became immune to it. None of the horned rabbits he studied were susceptible to the virus a second time.

Shope passed his research along to Peyton Rous, a friend and colleague in the field of early cancer research, who found that when he injected the virus deep inside rabbits, they died of cancer. This was a big deal—the first time science had linked a cancer to a virus in a mammal.

The discovery opened a new field of cancer research that led to the creation of successful viral cancer therapies, including the human papillomavirus vaccine that protects against cervical and other cancers. Rous' work earned him the Nobel Prize in medicine in 1966.

Around the same time Shope discovered the papillomavirus in rabbits, brothers Douglas and Ralph Herrick got to messing around in a little amateur taxidermy shop on their Wyoming ranch and mounted the antlers of a small deer to the head of a large jackrabbit, creating a comical “jackalope” creature. The boys sold their version of an antlered rabbit to bar owner Roy Ball for \$10, a handsome sum during the Great Depression.

From there the jackalope went on to become the most profitable taxidermy hoax in the world, adorning postcards, T-shirts, barroom and restaurant walls, shot glasses, keychains, and many other kitschy items.

The humble horned rabbit leaves a more noble legacy—helping further cancer research. ■

TCP Listen as W.F. Strong narrates this story on our website.

What was needed here was what linguists call a speech act, a moment in time where something is made real by virtue of pronouncement.

Jones began with “I, as president of the Republic ... am now present to surrender into the hands of those whom the people have chosen, the power and the authority which we have some time held.”

Noah Smithwick, a blacksmith in attendance, recorded the moment the Texas flag came down. Here is what transpired in that brief ceremony.

“Many a head was bowed, many a broad chest heaved, and many a manly cheek was wet with tears when that broad field of blue in the center of which, like a signal light, glowed the lone star, emblem of the sovereignty of Texas, was furled and laid away among the relics of the dead republic.”

The U.S. flag was raised, and the mood changed dramatically.

“We were most of us natives of the United States, and when the stars and stripes, the flag of our fathers, was run up and catching the breeze unrolled its heaven born colors to the light, cheer after cheer rent the air,” Smithwick recalled.

He tended toward that creature still common in Texas—the exceptionally proud Texan. Smithwick thought the star in the lower left corner of the U.S. flag should have been especially dedicated to Texas.

The exchanging of the flags made one statement. Jones made another: “The Republic of Texas is no more.” He made it politically true but never absolute because the republic lives on in the minds of Texans who still think of it as their country and their nation. ■

Republic’s End

‘Many a manly cheek was wet with tears’ when the Texian flag was lowered for the last time

BY W.F. STRONG

IN ABOUT A YEAR and a half—December 29, 2025—we’ll mark the 180th year of Texas statehood. That’s the day the proudest of Texans would say the U.S. was allowed to join Texas.

The vast majority of Texians—95%—voted for statehood, a level of agreement we haven’t enjoyed since. President James Polk signed the joint resolution making Texas a state December 29, 1845, but there was some confusion as to the official moment that the Republic of Texas passed into history and statehood status began.

Anson Jones, president of the republic at that time, said that February 19, 1846, was the actual day that the republic

ceased to exist. That day, Anson presided over a ceremony in Austin where the flag of the young but venerable republic was lowered for the last time and the U.S. flag was raised in its place.

You see, Texas couldn’t just let President Polk’s signing of a document 1,300 miles away be all there was to the moment. They couldn’t allow the republic that so many had died for to pass into history without properly memorializing the occasion.

So Jones arranged a ceremony in front of the Texas Capitol, really just a wooden house at that time, to mourn the passing of the republic and to celebrate Texas as the newest (and by far the largest) state in the union.

Perfect Potluck

Dishes so good you'll be tempted to eat them en route

BY VIANNEY RODRIGUEZ, FOOD EDITOR

Iliana de la Vega, esteemed owner of the Austin restaurant El Naranjo, shares her ultimate potluck dish: "*Rajas poblanas* (poblano strips) is a vegetarian dish that goes beautifully with grilled meats or fish but also with rice and pasta. You can make tacos with it or even use the rajas as a filling for quesadillas and omelets."

Rajas Poblanas

6 poblano chiles, seeds and veins removed

1 tablespoon canola oil

1 white onion, julienned

1 cup crema Mexicana

Salt, to taste

Corn tortillas

COOK'S TIP If crema Mexicana is unavailable where you shop, making your own is simple. Combine 1 cup heavy cream, 1 cup sour cream, 1 teaspoon salt and 1 tablespoon lime juice, and stir until smooth.

1. Preheat broiler. Place poblanos on a baking sheet. Roast under broiler, carefully flipping with tongs until charred on all sides, about 5 minutes. Place charred poblanos in a bowl and cover with plastic wrap until cooled enough to handle, about 15 minutes.

2. Remove skin from chiles. Slice them lengthwise into strips ½ inch thick.

3. Heat the oil in a large skillet over medium-high heat. Sauté the onion just until soft; do not brown.

4. Add the chile strips (rajas) and the crema Mexicana. Cook the chile mixture until heated through, about 5 minutes. Season with salt.

5. Serve immediately with warm corn tortillas.

SERVES 6

TCP Follow Vianney Rodriguez as she cooks in Cocina Gris at sweetlifebake.com, where she features a recipe for Mexican Corn Salad.

Perfect Potato Salad

CHERYL LEE
CENTRAL TEXAS EC

Lee’s potato salad is hearty and tangy, with a hint of freshness from the dill. It was so tasty and good that I’d eat plates of it by itself—no need for any of the bris- ket, sausage or hot dogs being served.

- 10 small russet potatoes, unpeeled, rinsed and cubed
- 1 cup mayonnaise
- 4 tablespoons mustard
- 1 large onion, finely diced
- 1 tablespoon minced garlic
- 1 tablespoon ground oregano
- 1 teaspoon onion salt
- 1 teaspoon garlic salt
- 8 hard-boiled eggs, cubed
- 1 tablespoon fresh dill for serving

- Place potatoes in a saucepan and cover with water. Bring to a boil, reduce heat and simmer until potatoes are fork tender, about 10 minutes. Drain and allow to cool.
- In a large bowl, stir together mayon- naise, mustard, onion, garlic, oregano, onion salt and garlic salt. Gently stir in potatoes and eggs.
- Chill until ready to serve.
- Sprinkle with dill before serving.

Easy Chicken Spaghetti Casserole

DONNA KENNEDY
WOOD COUNTY EC

I love this casserole because it’s so simple to make. Left- overs heat up great on day two, plus it freezes like a dream! (If there are leftovers of course.) This is serious comfort food.

SERVES 8

- 2 chicken breasts
- 3 chicken thighs
- 1 box spaghetti (16 ounces)
- 2 tablespoons (¼ stick) butter
- ½ bell pepper, stem and seeds removed, diced
- 1 medium onion, diced
- 1 can cream of chicken soup (10.5 ounces)
- 1 can cream of celery soup (10.5 ounces)
- 1 can chicken broth (14.5 ounces)
- 2 cups shredded mild cheddar cheese

- Place chicken in a large saucepan, cover with water and simmer until fork tender.
- Prepare spaghetti according to pack- age directions.
- In a skillet over medium-high heat, melt butter. Sauté bell pepper and onion until the onion is light and translucent.
- Shred chicken and mix all ingredients except cheese together in a large bowl.
- Preheat oven to 400 degrees. Spoon mixture into a 10-by-14-inch baking pan. Bake 15 minutes.
- Sprinkle cheese on top and bake 10 more minutes or until bubbly.

Cold Broccoli Salad

ALEXANDRA DIBRELL
CENTRAL TEXAS EC

This is one of the best broccoli salads I've ever had. Why? It's crisp and fresh, with a pop of heat—exactly what I want broccoli salad to be. It's also seriously addictive, thanks to the sweet and tangy combination of fresh lemon juice and rice vinegar.

- 1 pound fresh broccoli
- ¼ cup olive oil
- 2 tablespoons fresh lemon juice

- 2 tablespoons rice vinegar
- 2 teaspoons Dijon mustard
- 2 cloves garlic, minced
- ½ teaspoon salt
- ½ teaspoon ground black pepper
- ½ teaspoon red pepper flakes

1. Cut broccoli into bite-size pieces. Steam until tender. Allow to cool, then place in fridge.
2. In a large bowl, stir together olive oil, lemon juice, rice vinegar, mustard, garlic, salt, pepper and red pepper flakes. Place in fridge to chill.
3. When ready to serve, remove bowl from fridge and add broccoli, stir to coat and serve chilled.

SERVES 4

Don't Leave It All to Luck

BY VIANNEY RODRIGUEZ

Consider whether your contribution will add to high demand for an oven or increase crowding in the kitchen.

If you're not hosting, bring food that travels easily.

Bring the appropriate utensils for your dish: a serving spoon, pair of tongs or ladle. This way dishes won't be double-dipped, and you won't have guests grabbing food with their hands.

Consider the advantages of disposable pans: less mess, no lost casserole dishes and easier cleanup.

Consider the dietary restrictions of other guests.

Remember that beverages will be needed, and this can be your contribution.

TIRED OF SPRAYING?

COURTESY CHET GARNER

Carried Treasure

Canton has hosted the World's Largest Flea Market since the 1850s

BY CHET GARNER

THIS DEFINITELY wasn't the shopping trip I expected, I thought, as I loaded an 8-foot-tall Bigfoot sculpture into the back of my truck. I had just finished securing my new (to me) cowhide, vintage street signs and antique chair. I should have brought more tow straps.

This is the experience of visiting the World's Largest Flea Market, which happens every month in the town of Canton, midway between Dallas and Tyler. My legs, wallet and stomach were not prepared.

The tradition goes back to the 1850s when the circuit judge would make his monthly trip to town and the locals would congregate around the courthouse. They started bringing items to swap and sell: a gun for a dog or a cantaloupe for a dozen eggs. Soon a tradition was born that now attracts upwards of 150,000 visitors to First Monday Trade Days (which actually happens the weekend before the first Monday of each month).

As soon as I stepped onto the grounds, I realized that this wasn't a normal swap meet. The official area boasts more than 5,000 vendors across 400 acres. That doesn't even include the dozens (if not hundreds) of merchants who fill the streets and buildings of the town.

I walked from booth to booth, chatting with junkers and thrifters who had brought their special wares in search of the perfect buyer. While there was more than enough vintage "junk," I was surprised at the unique artisans selling incredible handcrafted goods—furniture, décor and even metal tools.

Very soon I had worked up an appetite and stuffed my face with some of the best fair food in Texas, including corny dogs and "upside-down" lemonade. Hey, with all the walking I did, I figured I had earned it. And so I ordered an extra piece of peach pie. ■

ABOVE The finds for sale at First Monday Trade Days in Canton stretch across 400 acres.

TCP Join Chet as he wades through acres of stuff. Watch the video on our website and see all his Texplorations on *The Daytripper* on PBS.

Thanks a Million

The Nature Conservancy is proud to have protected **one million acres of land in Texas**. This milestone could not have been achieved without the collaborative efforts of landowners, partners and supporters across the Lone Star State. Yet, the urgency to protect and preserve Texas' treasured landscapes, rivers, wildlife and way of life is greater now than ever. Together, we can find a way to achieve even more.

Pollinators

All aflutter, we are humming with anticipation. Photos flew in from every corner of the state, and we managed to alight on a few critters that have crawled their way to the top. No sting of disappointment here, just a swarm of entries that leave us buzzing with excitement.

CURATED BY GRACE FULTZ

1 MARK BONAME
JACKSON EC

"It is a rare sight to see hummingbirds feeding on sunflowers, but the drought this year in Texas made these little guys feed on whatever they could find."

2 CINDY VIGIL

Seedy Behavior

Gardening scavengers stoop low to help native species

BY SHERYL SMITH-RODGERS
ILLUSTRATION BY
CHANELLE NIBBELINK

COME MID-MAY, I turn into a street walker. Not *that* kind, mind you. Instead, I ply my trade with a green plastic cup and sharp eyes.

"Oh, there you are," hollers James, my husband, who's strolling along Greenlawn Parkway. "I figured I'd find you over here!"

My gaze is fastened on clumps of lazy daisies growing along the street. Among the white-petaled blooms with orange centers, I scan for dried seed heads. Now and then, I spot one. Happily, I lean down, pinch it off, then drop the itsy-bitsy treasure into my cup.

We walk while I scope out wildflowers that grow along a ditch. Patiently, I'm watching for Texas prairie parsleys, winecups and beeblossoms going to seed. I'll collect some seeds—but not all. I want to admire them again next spring.

I also want to establish them in our yard.

Since 2008, we've nurtured Texas native plant gardens at our Blanco home and adjoining meadow, a former vacant lot. Since then, I've expanded into rescuing, preserving and protecting overlooked native species that grow in our neighborhood. I collect seeds whenever I can.

Sometimes I dig up and relocate plants, too. For instance, a next-door neighbor several years ago gave me permission to transplant a yellow passionflower, Texas lespedeza and hoary false goldenaster that grew on her side of the fence, where they were often mowed down. Now the trio grows, unrestrained and lush, in our backyard.

I've also relocated Indian mallow, Texas snoutbean, scarlet pea, narrowleaf blue-eyed grass and Texas frogfruit to our gardens. Roemer's mimosa, too. I love to show kids how their tiny leaves fold up when touched. Magic!

Two regular walkers once rang our doorbell. "What's this?" asked Yalene, while daughter Arden held up a slender branch with yellow flowers. I eyeballed the specimen. Lindheimer's senna? James and I beelined to the easement where they'd found the plant. It was twoleaf senna, a new-to-me species. A few weeks later, I collected seeds from the site, which has since been cleared. Hopefully the seeds will germinate in our meadow, and the twoleaf senna will live on.

Why go to all that trouble? Because I deeply care about these plants. Because they were here long before us. Because they're resilient and adapted to our soils and climate. Because they, unlike most ornamental plants, sustain the pollinators and other wildlife that inhabit this place we call home.

From blunt-leaf rabbit-tobacco to zizotes milkweed, we've welcomed neighborhood natives into our gardens, where I hope they'll be appreciated and perpetuated for years to come. So call me a renegade. Or call me a tree hugger. I'll answer to either one and make no excuses.

I'm a street walker on a mission in a green-light district. ■

Protection and Style all with One Roof.
